

**Name: Carriage with extension arm**

**Type: 20-160**

**Technical data:**

Carriage load bearing capacity .....4,000 kg  
Carriage length .....800-1250 mm  
Carriage height .....490 mm  
Carriage weight .....95-115 kg

**Visual overview:**

**Intended use:**

Type 20-160 carriage with an extension arm has been designed for transportation conducted by means of tracks of suspended monorails operating in underground mining facilities, in both non-methane and methane fields. The carriage is to be assembled in transportation sets of equipment transportation units driven by type 20-101 self-braking shifting devices. It may also be coupled directly or in a transportation set with a diesel locomotive, a handling trolley and another driving unit admitted for operation in underground mining facilities.

**Additional information:**

This product is provided with:

- » permit no. GM-82/15 issued by the President of the State Mining Authority (WUG) for operation in methane and non-methane fields of mining facilities,
- » declaration of the device option conformity with technical requirements.
